

Data Cleaning & Formatting Log

Project 1: Dataset Standardization

Dataset Size:	1,201 Rows
Status:	100% Cleaned & Verified
Prepared By:	Data Analyst Team

1. Overview

This log documents the steps taken to clean and standardize the raw e-commerce dataset containing 1,201 sales records. The goal was to fix broken formats, remove extra spaces, and handle missing values using standard formulas. To keep the original data safe for review, all cleaning was done in new columns, while the old columns were kept intact.

2. Modification Log

ID	What was checked/fixed	Action Taken & Excel Formulas	Status
CR001	Duplicate Records	Scanned all 1,200 rows for duplicate entries. No identical rows were found; all data points are unique.	Done
CR002	Text Columns Casing & Spaces	Removed accidental double spaces and fixed text casing (e.g., changing "monitor" or "MONITOR" to "Monitor"). Formula: =PROPER (TRIM (Cell))	Done
CR003	Missing Coupon Codes	Found blank cells in the coupon column. Instead of deleting rows, filled blanks with the most frequently used coupon ("Freeship") using a combined formula. Formula: =IF (ISBLANK (T2) , PROPER (TRIM (INDEX (T\$2:T\$1201, MATCH (MAX (COUNTIF (T\$2:T\$1201, T\$2:T\$1201)) , COUNTIF (T\$2:T\$1201, T\$2:T\$1201), 0)))) , PROPER (TRIM (T2)))	Done
CR004	Date Format Consistency	Ensured every date across the 1,200 rows strictly follows the standard YYYY-MM-DD format. Formula: =TEXT (IF (ISNUMBER (C2) , C2 , DATEVALUE (C2)) , "yyyy-mm-dd")	Done
CR005	Number Formatting	Formatted UnitPrice and TotalPrice columns to standard currency with exactly 2 decimal places. Set Quantity and ItemsInCart as clean whole numbers.	Done

3. Summary Notes

- **Audit Trail:** The raw data columns were not deleted or overwritten. New columns with the prefix `Cleaned_` were created to make it easy for anyone to audit the formulas.
- **Data Type Check:** Verified that all numbers are correctly aligned to the right and text is to the left, ensuring zero errors when making pivot tables or charts.
